EXP 2: Candidate-Elimination Algorithm

CODE:

```
import matplotlib.pyplot as plt
data = [
    ['Sunny', 'Warm', 'Normal', 'Strong', 'Yes'],
    ['Sunny', 'Warm', 'High', 'Strong', 'Yes'],
    ['Rainy', 'Cold', 'High', 'Strong', 'No'],
    ['Sunny', 'Warm', 'High', 'Weak', 'Yes']
]

S = data[0][:-1]
for row in data:
    if row [-1] == 'Yes':
        S = [S[i] if S[i] == row[i] else '?' for i in range(len(S))]
print ("Specific Boundary:", S)
plt.plot(['Sky', 'Temp', 'Humidity', 'Wind'],
         [1 if x != '?' else 0 for x in S],
         marker='o', label='Specific Boundary')
plt.title("Candidate-Elimination Algorithm")
plt.xlabel("Attributes")
plt.ylabel("Specific (1) / General (0)")
plt.legend()
plt.grid()
plt.show()
```

OUTPUT

```
Specific Boundary: ['Sunny', 'Warm', '?', '?']
```
